
Atlante partners with Chargemap to improve electric vehicle charging experience in France, Italy, and Spain

Milan, 6 February 2024 – Atlante, the company of NHOA Group dedicated to electric vehicles fast and ultra-fast public charging, announces a multi-national partnership with Chargemap, Europe's leading platform for electric vehicle drivers, which will enable almost 2 million users of Chargemap's services to access Atlante's charging stations, offering localization and payment services.

The integration of the Atlante network into Chargemap's widely-used app will enable EV drivers in France (where Chargemap is the most used app in the segment), Italy and Spain to plan their routes to Atlante's charging stations, checking their availability in real time and once arrived recharge with ease via the app payment services.

Atlante and Chargemap moreover intend this partnership to pave the way for additional joint initiatives to deliver more services and better user experience to our current and future customers. For Atlante a greater focus on offering user-friendly charging is absolutely necessary to expand the benefits of modern, zero-emission electrical vehicles driving to an increasingly wider audience.

"We are excited to launch this partnership with Chargemap to increase the user-friendliness and accessibility of Atlante's fast and ultra-fast charging stations in France, Italy and Spain. Together with Chargemap we will work to prepare our network for mass adoption of BEVs, with a strong focus on offering customers a simple and reliable charging experience at affordable prices", commented Stefano Terranova, CEO of Atlante.

Chargemap, Europe's largest community of electric vehicle drivers, owes its success to its collaborative application that allows drivers to locate and access information about more than 720,000 charging points. Drivers can easily find the best charging stations around them, share feedback and reviews, plan long trips with their electric vehicle, and recharge with peace of mind. The goal is to provide electric car drivers with the best charging experience and to promote the adoption of zero-emission driving, furthering the transition to sustainable mobility.

"Our aim is to improve the charging experience for electric vehicle drivers throughout Europe. By connecting directly with Atlante, we can offer our users more reliable and up-to-date information about their charging stations. This partnership also allows us to expand the coverage of charging points in the Chargemap app, currently featuring over 1000 networks and more than 720,000 charging points across Europe," states Yoann Nussbaumer, CEO of Chargemap.

The collaboration ties in with recent news at Atlante: the decision to expand the accessibility of the fast and ultra-fast charging service by integrating POS systems for direct payment with credit, debit, and prepaid cards among the payment methods available at the brand's charging stations.

Atlante

Atlante is a company of NHOA Group (NHOA.PA, formerly Engie EPS), global player in energy storage and e-mobility, which develops technologies enabling the transition towards clean energy and sustainable mobility, shaping the future of a next generation living in harmony with our planet.

Atlante is developing the largest fast and ultra-fast charging network in Southern Europe, 100% enabled by renewables, enhanced by energy storage and on-site photovoltaic. It aims to install in Italy, France, Spain, and Portugal 5,000 fast and ultra-fast points of charge by 2025, and over 35,000 by 2030.

Operating since October 2021, Atlante has today more than 1,850 charging points online in its four countries with thousands more under construction and development. Leveraging on the technological heritage of the NHOA Group, including via collaboration with its sister company Free2move eSolutions, Atlante is a preferential network of the Stellantis automotive group and its customers. Atlante stations are fully interoperable and can be accessed by virtually any e-mobility app or charging card, and by any make and model of electric vehicles.
