

ATLANTE AND TELEPASS TOGETHER FOR ELECTRIC VEHICLES' FASTCHARGING IN ITALY

- The partnership promotes sustainable mobility and allows drivers to access the over 1,000 charging points part of Atlante network directly from the Telepass App
- It will be even easier to recharge with Atlante, thanks to the integration of the Italian charging points on the Telepass App
- Telepass provides access to one of the most extensive interoperable electric charging networks in Italy with over 40,000 charging points

Rome, October 17 2024 – Atlante, the company of NHOA Group dedicated to electric vehicles (EVs) fast and ultra-fast charging network, and Telepass, the Italian leader in toll collection and integrated mobility, announce a partnership to make over 1,000 electric charging points available nationwide with a simple click from the Telepass App.

In this way, Telepass customers will be able to easily access, in addition to all urban and extra-urban mobility services, the more than 1,000 Atlante charging points available in Italy through the app on their mobile phones. All Atlante charging points are open 24/7, compatible with every model of electric vehicle, and powered 100% by renewable energy. Additionally, they offer power outputs from 22 kW to 300 kW to adequately meet the drivers' different charging needs.

This synergy will extend Telepass's interoperable charging network and increase the visibility of Atlante's infrastructure, supporting the growth of sustainable mobility in Italy with increasingly smart, integrated, and customer-oriented services.

Telepass's goal, resulting from a company vision aimed at providing customers with the services they need and reducing the environmental impact on the planet, is to offer its customers an increasingly complete and widespread ecosystem of mobility services, ensuring time savings and ease of use, with an increasingly green perspective. Telepass has indeed placed the concept of sustainability at the center of its business strategy, in line with the broader commitment made by the Mundys Group to combat climate change through short, medium, and long-term greenhouse gas emission reduction targets, enabling the transition to increasingly sustainable mobility, also thanks to the adoption of innovative technologies or synergies like this one.

"The integration of Atlante's charging stations into our mobility ecosystem allows us to expand the offer for our customers and promote increasingly sustainable and smart mobility styles in some of the most polluted and congested cities in Italy. Our offer allows access, through the Telepass App, to one of the most extensive interoperable electric charging networks in Italy with over 40,000 active charging points, and thanks to the partnership with Atlante, we add another piece in promoting virtuous and green behaviors," comments **Aldo Agostinelli, Chief Consumer Sales and Marketing Officer of Telepass.**

"The agreement with a leading company like Telepass represents a fundamental step in bringing fast and ultra-fast EV charging closer to users. The integration of the Atlante network on the Telepass App strengthens our role as facilitators of electric mobility in Italy, simplifying the charging process for EV drivers with increasingly accessible and efficient solutions," says **Gabriele Tuccillo, CEO of Atlante Italia.**

This partnership confirms Atlante's presence among the pioneers in the world of electric mobility, focusing on an innovative strategy and the integration of various services. The increased accessibility to charging points in Italy fits into Atlante's vision of shaping zero-emission mobility accessible to everyone in Southern Europe.

To use the service, EV drivers will need to download the Telepass App and select the Atlante charging infrastructure: through the map of active stations, the nearest available charging point will be easily found.

Atlante

Atlante is a company of NHOA Group (NHOA.PA, formerly Engie EPS), global player in energy storage and e-mobility, which develops technologies enabling the transition towards clean energy and sustainable mobility, shaping the future of a next generation living in harmony with our planet.

Atlante is developing the largest fast and ultra-fast charging network in Southern Europe, 100% enabled by renewables, enhanced by energy storage and on-site photovoltaic.

Operating since October 2021, Atlante has today more than 2,300 charging points online in its four countries with thousands more under construction and development. Leveraging on the technological heritage of the NHOA Group, including via collaboration with its sister company Free2move eSolutions, Atlante is a preferential network of the Stellantis automotive group and its customers. Atlante stations are fully interoperable and can be accessed by virtually any e-mobility app or charging card, and by any make and model of electric vehicles.
